#5436

HYDROTOOLS™

By SWIMLINE®

COVER SAVER™

Connect provided hose to Cover Saver™ base at one end.

Place unit in center of pool and hang hose over side of pool.

Connect provided pump to opposite end of hose.

Squeeze siphon pump until water starts to flow. Adjust the threaded air intake cap as needed. Remove siphon pump from hose.

5 To have water flow further away from pool area: Attach garden hose adaptor where siphon pump was and then connect garden hose. Garden hose should be laid out prior to being connected.

NOTES:

Water will not flow uphill.
Filling hose with water prior to using siphon pump will help siphon action to start more easily & quickly.
End of hose and siphon pump should be lower than unit; when working to prime/create siphon action.
